

SUMMARY

Full-stack developer and Queen's Software Design graduate who builds and ships production systems. Founded [Uforiya](#), a B2C SaaS platform for music creators, launched [Fint](#), a privacy-first finance tracker on the App Store, and architected the backend for [Revved Up](#), an accessible fitness platform that automated trainer workflows, earning an Honourable Mention at Queen's Creative Computing Showcase 2026.

EXPERIENCE

Revved Up (Full-Stack System for Accessible Fitness Management) | Backend Developer | Sept 2025 - April 2026 | [Live](#)

- Designed the architecture for a TypeScript and Node.js system using a layered controller, service, and repository structure, automating trainer program management and saving 3–6 hours of admin work per trainer each week.
- Collaborated with a 5-person team across backend and frontend to integrate the system, aligning on API contracts and data flow so both sides shipped on time without blockers.
- Enabled 70+ users to access workout programs online by deploying Revved Up to the queensu.ca domain on Azure with reverse proxy routing, SSL encryption, and SQLite persistence, plus documentation for setup and maintenance.

Lead Software Developer, Queen's Black Tech | Sept 2025 - May 2026

- Led React and TypeScript development for Queen's Black Tech's website, building and shipping core features that connected 100+ Black students with tech events and career opportunities.
- Mentored a cohort of interns with no prior coding experience on Git workflows and React best practices, helping them ship production features independently.

Digital Classroom Support Staff, Queen's University IT Services | Sept 2025 - April 2026

- Performed preventive maintenance and diagnostics across 130+ classroom spaces, resolving A/V hardware issues directly and escalating specialized problems to senior technicians to keep rooms running with minimal downtime.
- Responded to emergency support calls during lectures, quickly troubleshooting and restoring mics, projectors, and displays to minimize class disruption and keep teaching effective.

Teaching Assistant, CISC101 (Intro to Programming) | Queen's University | Sept 2023 – April 2024

- Delivered Python workshops to 200+ students, breaking down loops, functions, and data structures to help 50+ struggling learners grasp the basics and complete the course.
- Conducted 1-on-1 tutoring sessions that helped 50+ students debug code and go from zero programming knowledge to completing their first Python programs.

PROJECTS

Uforiya - Music Collaboration Platform | Founder & Solo Developer | TypeScript, Next.js, Python, React | [Link](#)

- Architected and launched a B2C SaaS solo from cloud storage through backend API, Python audio worker, and React frontend, enabling musicians to collaborate and manage their unreleased music remotely; live with 20+ users.
- Eliminated ops overhead by building serverless infrastructure on Vercel, Supabase, and Cloudflare, enabling instant deployments and automatic scaling.
- Secured unreleased music and user data by implementing backend-enforced permissions and RLS policies across 13 tables, keeping all access control server-side.

Fint - iOS & iPadOS Finance App | iOS Developer | Swift, SwiftUI, CloudKit, Core Data, Xcode | [App Store](#) | [GitHub](#)

- Built fully on-device data storage with Core Data and CloudKit sync, eliminating financial privacy risk by requiring no accounts or servers and keeping all user data within their Apple ecosystem.
- Designed daily, weekly, and yearly Swift Charts dashboards with proactive budget alerts at 50%, 75%, 90%, and 100% thresholds, surfacing actionable spending patterns and giving users real-time visibility into their finances.
- Implemented on-device receipt scanning with Apple Vision OCR, letting users log purchases by pointing their camera at a receipt instead of typing, with all data stored locally and optionally synced across Apple devices through iCloud.

EDUCATION

Queen's University | Honours B.Comp in Software Design | September 2022 - May 2026

SKILLS

- **Languages:** TypeScript, Python, Swift
- **Frameworks:** React, Next.js, Node.js, SwiftUI
- **Databases:** PostgreSQL, SQLite
