SUMMARY

Full-stack developer and Software Design graduate from Queen's University who builds and launches production systems. Founded Uforiya, a B2C SaaS for music creators to collaborate remotely, and helped build Revved Up's accessible fitness platform, which cut manual trainer work by 3 to 6 hours a week and earned an Honourable Mention at Queen's Creative Computing Showcase 2026.

EXPERIENCE

Revved Up (Full-Stack System for Accessible Fitness Management) | Backend Developer | Sept 2025 - April 2026 | [Live](#)

- Designed the architecture for a TypeScript and Node.js system using a layered controller, service, and repository structure, automating trainer program management and saving 3 to 6 hours of admin work per trainer each week.
- Assisted in implementing role-based access control with service-layer permission checks across four user roles, enabling Revved Up to restrict feature access cleanly by role.
- Collaborated with a 5-person team across backend and frontend to integrate the system, aligning on API contracts and data flow so both sides shipped on time without blockers.
- Enabled 70+ users to access workout programs online by deploying Revved Up to the queensu.ca domain on Azure with reverse proxy routing, SSL encryption, and SQLite persistence, plus documentation for setup and maintenance.

Lead Software Developer, Queen's Black Tech | Sept 2025 - May 2026

- Led React and TypeScript development for Queen's Black Tech's website, building and shipping core features that connected 100+ Black students with tech events and career opportunities.
- Mentored 2 interns with no prior coding experience on Git workflows and React best practices, helping them ship production features independently.

Digital Classroom Support Staff, Queen's University IT Services | Sept 2025 - April 2026

- Performed preventive maintenance and diagnostics across 130+ classroom spaces, resolving A/V hardware issues directly and escalating specialized problems to senior technicians to keep rooms running with minimal downtime.
- Responded to emergency support calls during lectures, quickly troubleshooting and restoring mics, projectors, and displays to minimize class disruption and keep teaching effective.

Teaching Assistant, CISC101 (Intro to Programming) | Queen's University | Sept 2023 – April 2024

- Delivered Python workshops to 200+ students, breaking down loops, functions, and data structures to help 50+ struggling learners grasp the basics and complete the course.
- Conducted 1-on-1 tutoring sessions that helped 50+ students debug code and go from zero programming knowledge to completing their first Python programs.

PROJECTS

Uforiya - Music Collaboration Platform | Founder & Solo Developer | TypeScript, Next.js, Python, React | [Live](#)

- Launched a B2C SaaS solo, architecting the full stack from cloud storage through backend API, Python audio worker, and frontend, with Claude helping on non-critical implementation, resulting in a live platform with 20+ users.
- Eliminated ops overhead by building serverless infrastructure on Vercel, Supabase, and Cloudflare, enabling instant deployments and automatic scaling.
- Secured sensitive user data by implementing backend-enforced permissions and RLS policies, keeping all access control off the frontend.
- Demonstrated technical communication by publishing an article on backend-first architecture, serverless tradeoffs, and security-first design, documenting the reasoning behind Uforiya's key architectural decisions. [\[Link\]](#)

Spend Sight - iOS finance app | Swift, SwiftUI, Xcode | [\[Website\]](#) | [\[GitHub\]](#)

- Built an iOS receipt scanning app using SwiftUI and Apple Vision OCR to extract store name, total, and date from physical receipts, storing structured data locally with Core Data for persistent access across app launches.
- Transformed raw receipt history into actionable spending insights by building daily and weekly chart views with Swift Charts, surfacing 30-day totals and average daily spend in a single dashboard.

EDUCATION

Queen's University | Honours B.Comp in Software Design | September 2022 - May 2026

SKILLS

- **Languages:** TypeScript, JavaScript, Python, Swift, Java, C++, HTML, CSS
- **Frameworks:** React, Next.js, Node.js, SwiftUI
- **Tools:** Git, GitHub, Vercel, Azure, Supabase, Cloudflare, Xcode, Figma, Bash
- **Databases:** MySQL, PostgreSQL, SQLite
